Cebu City, Cebu, Philippines | +63 906 322 0193

PROFESSIONAL SUMMARY

Web developer with expertise in web development, data analytics, and client-focused solutions. Experienced in building responsive web applications, performing data-driven analysis, and supporting both frontend and backend development. Strong communicator and team player, passionate about delivering innovative solutions and continuously enhancing technical skills in fast-paced IT environments.

PROFESSIONAL EXPERIENCE

Software Engineer – Fast Distribution Corp. (Full time)

Feb 2025 – Apr 2026

- I worked on a the front-end development and back-end API integration for a Sales Force Automation (SFA) web dashboard, enabling real-time tracking and monitoring of field sales teams.
- I led an analytics project to extract, clean, and transform raw transactional data into structured, report-ready datasets, enhancing business intelligence capabilities.
- I wrote and optimized complex SQL stored procedures to streamline data transformation.

Software Engineer – Fast Distribution Corp. (Contractual)

Feb 2024 – Jan 2025

- I enhanced website UI/UX by developing responsive components, significantly improving user engagement and optimized frontend to maximize website performance, page load speeds.
- I integrated Google Maps API to embed interactive, location-based features and real-time tracking elements.

Web Developer Intern – Fast Distribution Corp.

Sept 2023 – Jan 2024

- I redesigned and modernized the company website with a clean, responsive, and user-friendly interface.
- I developed interactive charts and dashboards using Metabase to provide clear business insights and support data-driven decision-making.

PROJECTS

RAVAMate: Sales Force AutomationDashboard & Real-Time Tracking

- Built and maintained the front-end interface and back-end APIs for a Sales Force Automation dashboard, ensuring seamless real-time data synchronization.
- Integrated location-based services using Google Maps API to track and monitor sales team movements dynamically.

Technologies: PHP, Laravel, SQL, JavaScript (jQuery), Bootstrap, HTML5, CSS3, Google Maps API

Project RoMM Business Analytics

- Used SQL to clean, transform, and structure raw sales and sell-out data into organized datasets ready for business analysis.
- Designed data models to track sales trends, performance gaps, and distribution opportunities across different products, distributors, and time periods.

Technologies: SQL Server, Metabase

Fast Web-based Enterprise Resource Planning (ERP)

- Developed modules to track warehouse stock movements, maintain accurate inventory levels, and store system maintenance records.

Technologies: PHP, Laravel, Bootstrap, HTML5, CSS3
